

COVID-19 Cumulative Hospitalizations

April 22, 2020

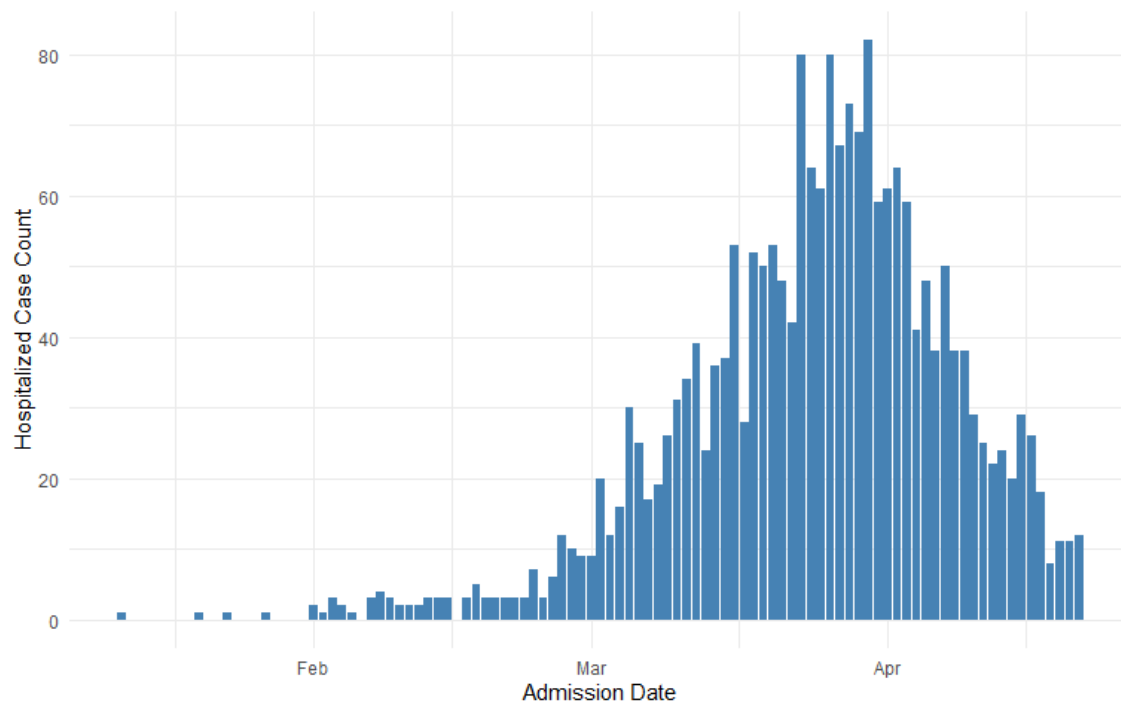

The following report contains data on hospitalizations identified among lab-confirmed cases of COVID-19 among Washington residents reported through 11:59pm on 2020-04-21.

Note: The data are incomplete. To date, 78% of acute care hospitals have reported retrospective hospitalizations that occurred since January. Several hospitals that have not reported include larger hospital systems. Hospitalizations are being identified prospectively at 87% of acute care hospitals. With the exception of two hospitals, these hospitals are smaller facilities.

COVID-19 Cases Hospitalized

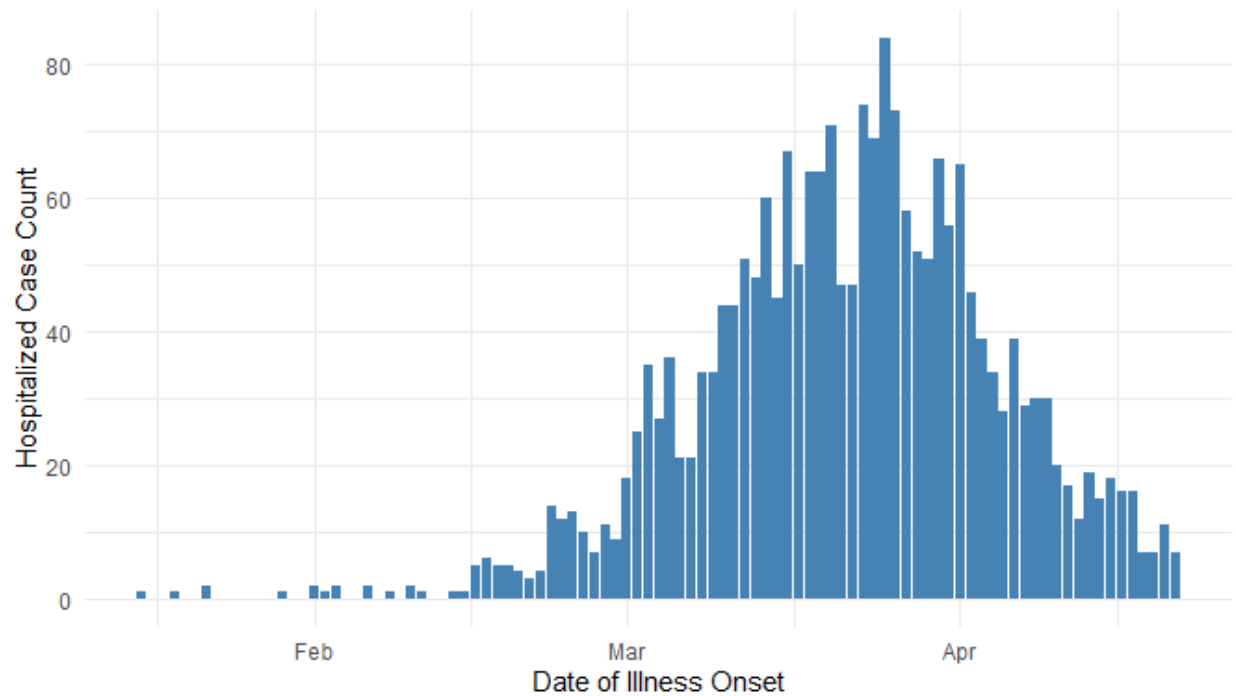

Hospitalized	Count	Percent of Cases
No	6763	75.7%
Yes	2167	24.3%
Unknown	3564	28.5%

Epidemiological Curve of Hospitalized COVID-19 Cases by Date of First Admission*

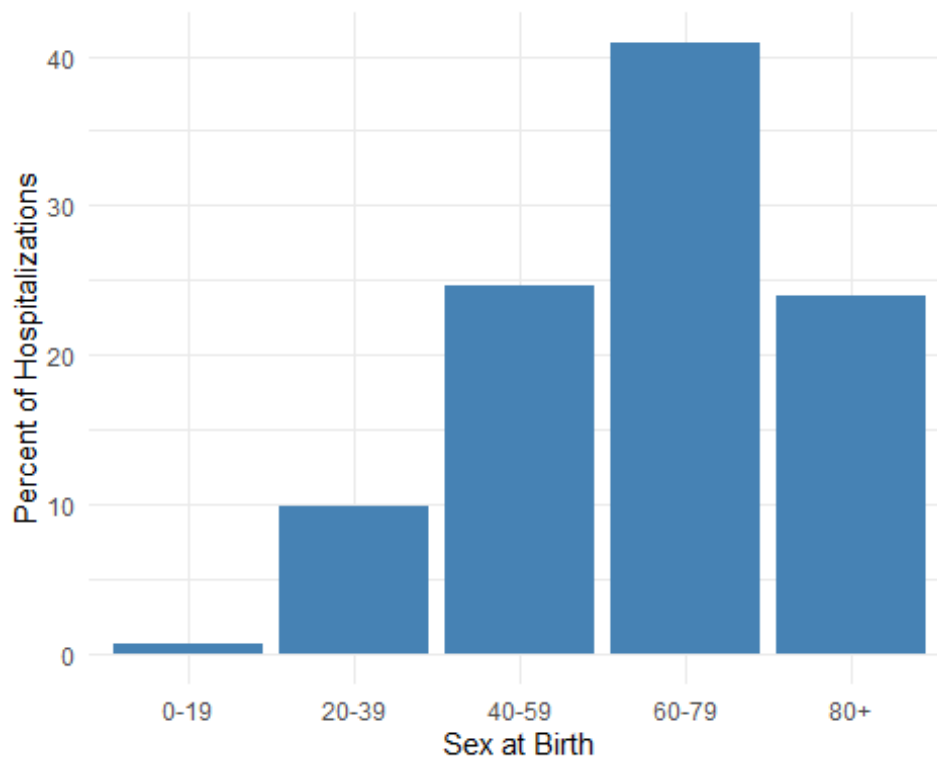

* 51 records indicate the case was hospitalized but admission date is missing. These events are excluded from the chart.

Epidemiological Curve of Hospitalized COVID-19 Cases by Illness Onset

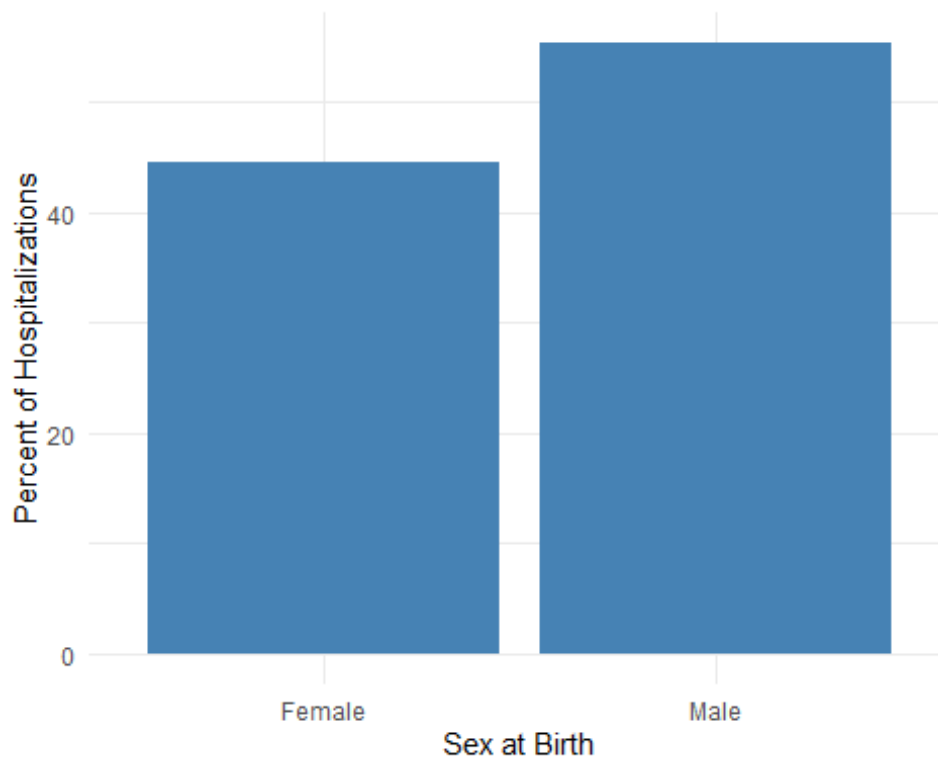

Hospitalizations by Age

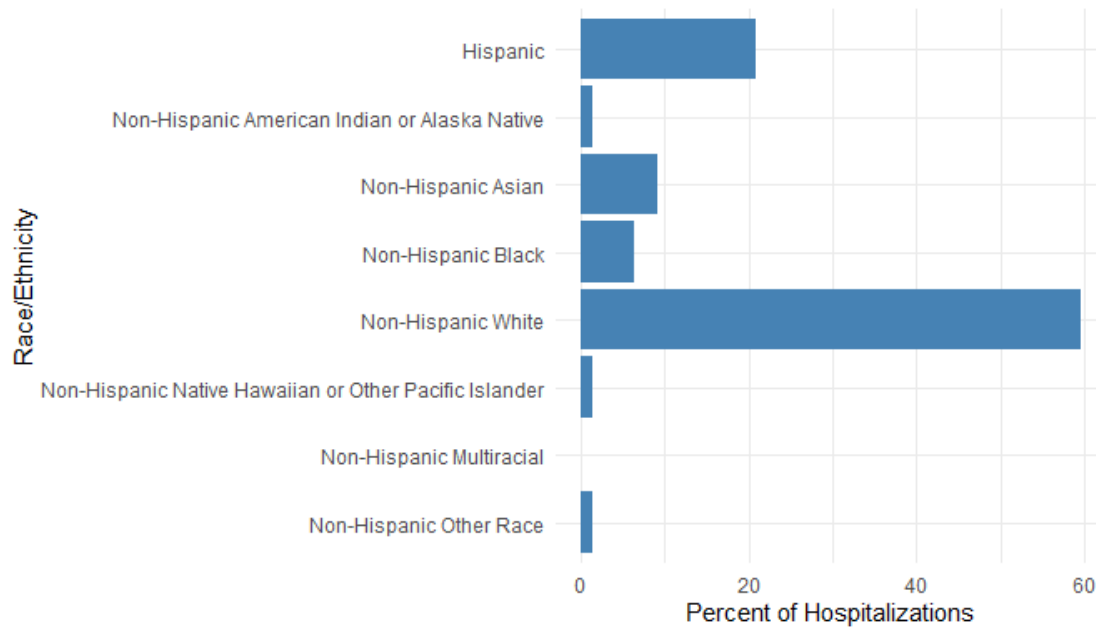

Age Group (years)	Percent of Hospitalizations
0-19	0.7%
20-39	9.9%
40-59	24.6%
60-79	40.9%
80+	23.9%
Unknown	0.1%

Hospitalizations by Sex

Sex at Birth	Percent of Hospitalizations
Female	44.6%
Male	55.4%
Unknown	1.3%

Hospitalizations by Race/Ethnicity

Race/Ethnicity	Percent of Hospitalizations
Hispanic	20.8%
Non-Hispanic American Indian or Alaska Native	1.4%
Non-Hispanic Asian	9.1%
Non-Hispanic Black	6.4%
Non-Hispanic White	59.6%
Non-Hispanic Native Hawaiian or Other Pacific Islander	1.3%
Non-Hispanic Multiracial	0%
Non-Hispanic Other Race	1.4%
Unknown	32.9%
